

Trailer Camera

Trailer Camera

TrailerCam Feature

Trailer camera is

Une plateforme précâblée de surveillance mobile et autonome à déploiement rapide. 4 caméras Jour/Nuit PTZ motorisées couvrant un périmètre >500m de diamètre positionnées en haut d'un mât télescopique facilement réglable en hauteur.

TrailerCam assure l'enregistrement local et la transmission d'images par radio numérique longue distance & par 3G sur internet, ainsi que la gestion d'alarmes.

Ses batteries et sa gestion d'énergie UPS (Uninterruptible Power Supply) lui permettent de fonctionner jusqu'à 1 mois entre 2 recharges.

Spécialement adapté à la surveillance des chantiers mobiles, le TrailerCam peut transmettre automatiquement des alertes de détection d'intrusion par mail, SMS, Push, ou FTP selon les options embarquées. Bien que stockées localement, les images live ou enregistrées peuvent être consultées à tout moment sur internet par un responsable possédant les codes d'accès.

Le TrailerCam sécurise efficacement les sites de chantiers en protégeant le matériel, les matériaux de construction, les dépôts de carburants, etc ...

Dimensions of Trailer Cam

Potable monitoring, recording and data transmitting system.

TrailerCam

TrailerCam™ is a portable monitoring, recording and data transmitting system. The portable camera system makes it possible to perform hands-free visual surveillance for short- or long-term needs. Its innovative design allows for quick and easy access to the system and properly securing sites, where fixed traditional CCTV systems can not be applied. Transfer and Deploy, the TrailerCam™ to locations where continuous, round-the-clock surveillance is required.

TCS-2000

Data Transmission

The optional Wireless 2.4GHz data transmission offers ultimate flexibility by allowing you to monitor the place at site of play back the recorded at any time.

Further high-touch customization is available in this wireless system by choosing any kind of high-speed and advanced wireless data transmission technology. Incorporating the latest technology to fit the application and country standard, this multi-function tower provides more power and accessibility in one regged trailer design.

Optional Componets

IR Speed PTZ Camera : WCA-Series

- IP66 Outdoor with Fan / Heater.
- High-powered Zoom with D&N.

Mini Endless PTZ Camera : WCM-101

- Optical 10x Zoom.
- Outdoor housing attachable.

Speed PTZ Camera : WCC-E261

- High-powered Optical 26x Zoom.
- Built-in Digital Image Stabilizer.

Wireless LAN (Optional)

- Wireless IEEE802. 11N/b/g.
- Bandwidth : 2.4GHz, 300Mbps.

Mobile DVR

- JPEG, 4ch Video Input.
- 30fps at 720 x 240, 329 x 240.

Power Charger

- 110V / 220V Input, 12V Output.
- 30A.

Lead Accumulator (Electrolyte)

- Unit Capacity : 12V, 250A
- Total Capacity : 12V, 1000A

Antenna (Optional)

- Wireless non-directional.
- Capacity : 2.4GHz, 7dB.

Installation

- * Tow the TrailerCam by Car.
- * Fixes a horizontality by using 3 landing jacks.
- * Ajust the height of pole.

>>

>>

STEP 1 >

Fixes a horizontality by using 3 landing jacks.

STEP 2 >

Raise the pole up and fix it.

STEP 3 >

Ajust the height of pole.

>>

>>

>>

STEP 4 >

Set the camera direction, position.

STEP 5 >

Separate the TrailerCam from the Car.

STEP 6 >

Camera setting finished.

STEP 7 >

System setting finished.

TrailerCam Applications

Construction Sites

Construction Security:

Late at night or even in the middle of the day, thieves target job sites to steal valuable materials and heavy equipment. The CAM-V mobile surveillance system was designed to help construction project managers protect their job sites from these losses. Through the deployment of our product, Cameras Onsite has helped the growing list of construction clients improve their security presence.

Operational Management:

When a vendor promises delivery at a specified time or a subcontractor assures the delivery of key workers at a designated time, the CAM-V mobile surveillance system can help construction operation managers with verifying their actual arrival. Via a laptop in the field or at any computer station, a construction manager can check multiple job sites to make sure deliveries of key workers or materials arrive on time.

Safety and OSHA Compliance:

Even though most safety workers understand the need for safety rules, there are the occasional few that try to bend the rules, especially when they believe that their safety or on-site management team is not monitoring them. The CAM-V mobile surveillance system allows a construction's safety and management team to use the surveillance cameras to view and record any unsafe actions. Once a job site's work force understands how the CAM-V can be used to monitor and also reward safe performance, it could help lower the likelihood of injuries as well as possibly decrease the insurance costs for liability and worker's compensation coverage.

TrailerCam Applications

Special Events

Major Concerts

When major entertainment acts take the stage at an outdoor or indoor venue, the CAM-V mobile security solution not only protects concertgoers, their autos and their possessions, our mobile surveillance solution gives their security teams peace of mind. Our CAM-V is ideal for those rowdy venues that encourage people to have a good time but also protect the facilities from theft and destruction.

Airshows

When military bases host airshows featuring the Thunderbirds or Blue Angels, security officials have found that the CAM-V can help them not only with security, but also for operational management. As the event ends, security police can manage traffic flow not only on base but also work with local police as the cars leave each base for public roadways. With the stringent requirements for managing an airfield for crowd control and foreign object debris, the CAM-V can allow a military base's safety team to view the field in real time to make sure there are no balloons or popcorn boxes on an active runway before an aerial performance. Air show managers can also make sure that a crowd of aircraft enthusiasts don't impede the departure of every plane from an event command post.

TrailerCam Applications

Federal Relief and Surveillance

Federal Relief Sites

When a hurricane or other natural disaster hits a community, government responders not only have to save victims but also protect property. The deployment of one or more CAM-V mobile security solutions allows emergency responders to not only detect looters but also locate victims in a disaster zone. When needed, the Cameras Onsite staff will work with government procurement agencies to set up leasing programs to help provide an online video security and operational surveillance package.

Border Surveillance

As concerns over homeland security grow for U.S. Borders, the CAM-V mobile security solution can help federal and state officials with surveillance solutions. Unlike other security options, the CAM-V mobility allows its owners to move it from location to location to meet the security concerns of each security zone.

Application

TrailerCam Applications

Parking Lot Security

Parking Lots

When two rival schools play each other in a sporting event, how can security managers protect cars and other property from thieves? When someone decides to throw a rock or deface a car or property after a game, how can a security professional spot this problem? The CAM-V can help police officers spot potential problems from their laptop screens.

Many thieves target NFL games, major college sporting events or high school competitions to steal cars, engine parts or other valuables because they know that most have a very limited security staff. Since most sports venues typically have a several events per year, Cameras Onsite has developed a leasing program for those who need to use the mobile surveillance system for these special events that require additional security.

Aircraft Accidents

Aircraft accidents:

When a military or civilian aircraft crashes, it's hard for an on-scene commander to protect an investigation area from the media and other civilian onlookers. A CAM-V mobile security solution augments a cadre of local police, military police and other security members by allowing a security team chief to monitor a crash site with less staff standing patrol outside in the heat, cold and rain. Should a CAM-V camera detect someone not on the security or crash response staff, it can send a signal to the nearest police or security professional to investigate it.
